

.NET Software Engineer (m/f/d)

Apply now

Founded in 2012, wikifolio.com is a dynamic and rapidly growing FinTech in Vienna and the best-known company for B2C investments in German-speaking countries.

We believe that everybody should be able to invest successfully in the capital markets – regardless of whether you have €100 or €100,000 to invest. We stand for the democratisation of the investment market and put our users at the centre of our focus.

If you are passionate about backend development and want to be part of an innovative and international team, we'd love to hear from you!

Responsibilities

- › Develop, maintain, and optimize backend services using .NET Core within a microservices architecture.
- › Design scalable, reliable, and maintainable systems, contributing to system architecture and overall technical design.
- › Write clean, maintainable, and efficient code, adhering to best practices and industry standards.
- › Conduct thorough code reviews and provide constructive feedback to ensure code quality, security, and performance.
- › Collaborate closely with cross-functional teams to understand business requirements and deliver robust technical solutions.
- › Propose solutions that leverage customer opportunities and help achieve business goals.
- › Contribute to the entire software development lifecycle (SDLC), from requirements gathering and design to deployment and monitoring.
- › Implement and maintain unit and integration tests.
- › Identify and resolve performance bottlenecks, bugs, and other technical challenges.
- › Stay up-to-date with the latest trends, tools, and frameworks in backend development and apply them when appropriate.
- › Mentor junior engineers and assist in fostering a collaborative team culture.
- › Ensure systems are designed and implemented with scalability, security, and maintainability in mind.

Requirements

- › Proven experience (5+ years) as a Backend Engineer, ideally in a Senior role.
- › Strong proficiency in .NET Core and C#, with expertise in building backend services for microservices architectures.
- › Solid understanding of system design principles and ability to design distributed systems.
- › Experience with RESTful APIs and gRPC.
- › Knowledge of containerization technologies (Docker).
- › Experience with database design and working with both relational (SQL Server) and non-relational databases

(Elasticsearch, Redis).

- › Experience with RabbitMQ or other message brokers, including designing and implementing asynchronous messaging patterns.
- › Experience with CI/CD solutions and pipelines.
- › Familiarity with monitoring and logging tools (ELK stack, Dynatrace).
- › Excellent problem-solving skills and a proactive approach to identifying and addressing challenges.
- › Strong communication skills (proficient in English) and the ability to work effectively in an international team environment.
- › Passion for learning and staying current with emerging backend development trends and technologies.

Nice to have

- › Proven experience with Elasticsearch in low-latency scenarios.
- › Familiarity with cloud platforms (preferably Azure) and related tools and services.
- › Experience with orchestration tools such as Kubernetes.
